Concept

In times of a new world century, where humans no longer exist_

/

/

My concept is a visual representation of the future, where the digitalization has made its expansion.

/

Artificial Intelligence has defeat ordinary civilization.

People gradually transform into cyborgs. STURDY, FAST, RESILIENT. Programmed to work IMPECCABLE.

/

No flaws allowed

/

Nevertheless, viruses, worms and malware programs still be in circulation.

Radically destroying the computer.

/

/

A virus has entered your body_

Reboot started

My brand „LOVELETTER“ is inspired by the devastating computer virus from 2001.

/

I'm fascinated by the creators approach, especially. By its yet simple message „iloveyou“ he knew how to take advantage Of people's ego, loneliness and curiosity. Causing an estimated world wide damage of 10 billion dollars.

/

In regard to the very promising e-sports, Another component of my search of inspiration included cyborg like video game characters. Particularly sub zero, samus, and scorpion.

/

For my implementation I got inspired by essential design elements of its characters that represent their rugged yet agile and composited nature.

/

To achieve those optics I played with an interaction Of wide and narrow, fragile looking asymmetric silhouettes. Also, it was important for me to display the multifunctionality by creating looks that are made to be worn in different ways. Either by adding or subtracting selected pieces.
